August 8, 2040

Executive Summary

The Second Valerius Library was formed to provide a new learning space and a new repository for the school's growing collection of books, journals, and educational equipment. It was successfully completed on July 1, 2040.

Objectives

The project's objectives were:

Accomodate the need for a new learning space for the students.

have a new repository for the school's learning materials such as books, journals, and other sources of information.

The Project

The Project

The Valerius Academy constructed the 2nd Library from January 05, 2039 to June 01, 2040. It was a joint project between the academy and Belfry Construction that consists of 4 floors and 20 rooms located at White Drv. Los Angeles, CA.

Scope

This project consisted of phases 1 and 2. The library was built to accommodate the university's entire student body .

Methodology

The project manager worked closely with the senior engineer, the school board, and the student council. This ensured that the project's resources and plan were utilized in a way that follows everyone's needs.

Timeline

PHASE	DESCRIPTION	END DATE
Phase 1	Sourcing materials, and personnel	May 29, 2040
Phase 2	Construction & inspection of the finished building	June 2, 2040

Team

Alessa Hand

Site Construction Manager

She handled all on-site construction staff and activities and coordinated closely with the school board.

Shawn Griggs

Senior Engineer

He supervised the construction to ensure it followed the original blueprints and the university's specifications.

Findings

The findings were as follows.

1. The 2nd Valerius Library project was successfully completed within the allotted period of 6 months.
2. The construction of all future university buildings will require more time to increase its quality and to ensure its safety for the student body.

Findings

The findings were as follows.

1. The 2nd Valerius Library project was successfully completed within the allotted period of 6 months.
2. The construction of all future university buildings will require more time to increase its quality and to ensure its safety for the student body.

Conclusion

The 2nd Valerius Building project was successfully developed and built by July 01, 2040. The team finished the project on time and within the budget agreed on with the university board of directors. The library has met all government and safety requirements and its rooms will be available for use by August 1, 2040.

Recommendations

The company will continue to develop strong relationships with its current list of suppliers, equipment providers, architects, engineers, interior designers, and the like. All future university building projects (and any other building projects similar in size and scope) should have a preparation phase of no less than a month long.
